

Mercedes DisplaySwitch

WEB:

From 2021/2023/2024

C / GLC / Sprinter

DisplaySwitch - Forget additional displays

Our DisplaySwitch enables direct integration of HDMI- or DisplayPort-capable devices into your car - without dependence on proprietary solutions like Android Auto or Apple CarPlay. You benefit from full multitouch functionality and automotive-grade quality.

In some vehicles, we additionally offer you the option to cascade two DisplaySwitches in series. This allows up to two sources to be connected to the infotainment system—for example, mission-critical software and radio applications.

Operate Windows PCs as well as numerous other operating systems conveniently via the original display. Thanks to automatic switching to the rear-view camera, traffic safety is guaranteed at all times.

Additional Products:

For the new Mercedes models, we also offer:

- B-3450225 Signalbox
(C-Class)
