Speed 15

ER-70

Signalbox ABH

April 2026

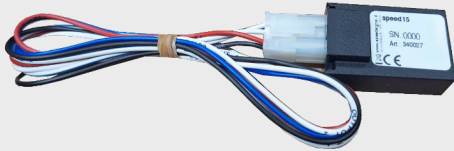

Speed 15

Speed-dependent switch with adjustable threshold

The Interface Speed 15 is a speed-dependent switch that can be configured manually. It is ideal for retrofitting parking aids or for the automatic control of running boards. The 12 V output is deactivated when the configured speed threshold is exceeded. If the vehicle speed drops below this value again, the output is automatically reactivated.

Item number B-340027

ER-70

Electronic load relay – 12 & 24 V

A signal (positive or negative) can switch a load of up to 70 W (shortly 90 W). There is nearly no load on the control signal. Therefore signals can also be tapped from monitored circuits (e.g. no error message from lamp fault detection system).

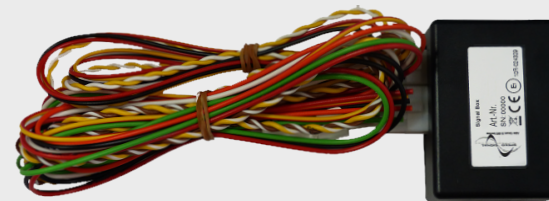

Item number B-340116

Signalbox ABH

CAN bus adapter for outputting the following analogue +12V signals

- Speed-dependent switch
- Reversing alarm
- Parking brake
- Front/rear door contacts
- Tailgate
- Ignition
- Hazard warning lights
- Central locking
- Alternator run (D+)

Item number B-3450xx (vehicle-specific item number, see product search)
